

Why use Storm Strips?

PURPOSE

Storm Strips solve difficult maintenance problems associated with aging metal door assemblies. Non-specialists often find it inconceivable that hollow metal door assemblies will sag, twist and warp over time. They do. In spite of these problems, most irregular metal doors continue to function well because the hardware can be adjusted. Weather-stripping is a different matter because it has to maintain conformance over the entire door. E.g.: 20 lineal feet. Standard door seals have very limited compression and, after time, stop working or require constant maintenance. Irregular door assemblies could be disassembled or replaced at the cost of lost usage, and great expense. Or:

SOLUTION

Storm Strips are a passive door seals that comprehensively seal out drafts, pests and rodents. High strength aluminum retainers, oversize foam seals and High-Density Brushes provide conformance at the uneven surfaces. This system is a permanent repair that allows users to continue to use their existing doors indefinitely.

COMPANY

We are a B2B supplier of after-market door seals.
